

# Build My Workspace

## Objectives

- A System
  - ❖ That shows the recommended workspaces near the customers.
  - ❖ That allows clients to customize their workspaces according to their need.

## Existing Challenges

- No appropriate system to guide the companies.
- No room for building new workspaces.
- Companies cannot spend a lot of time to get their workspace designed.
- Following are the expectations from the system built.
  1. User should be able to login after Registration.
  2. User should be able to search existing workspaces by location preference so that, system can recommend workspaces along with location on maps.
  3. Book a Visit to the place and suggest customizations.
  4. Fix up on a deal / agreement.

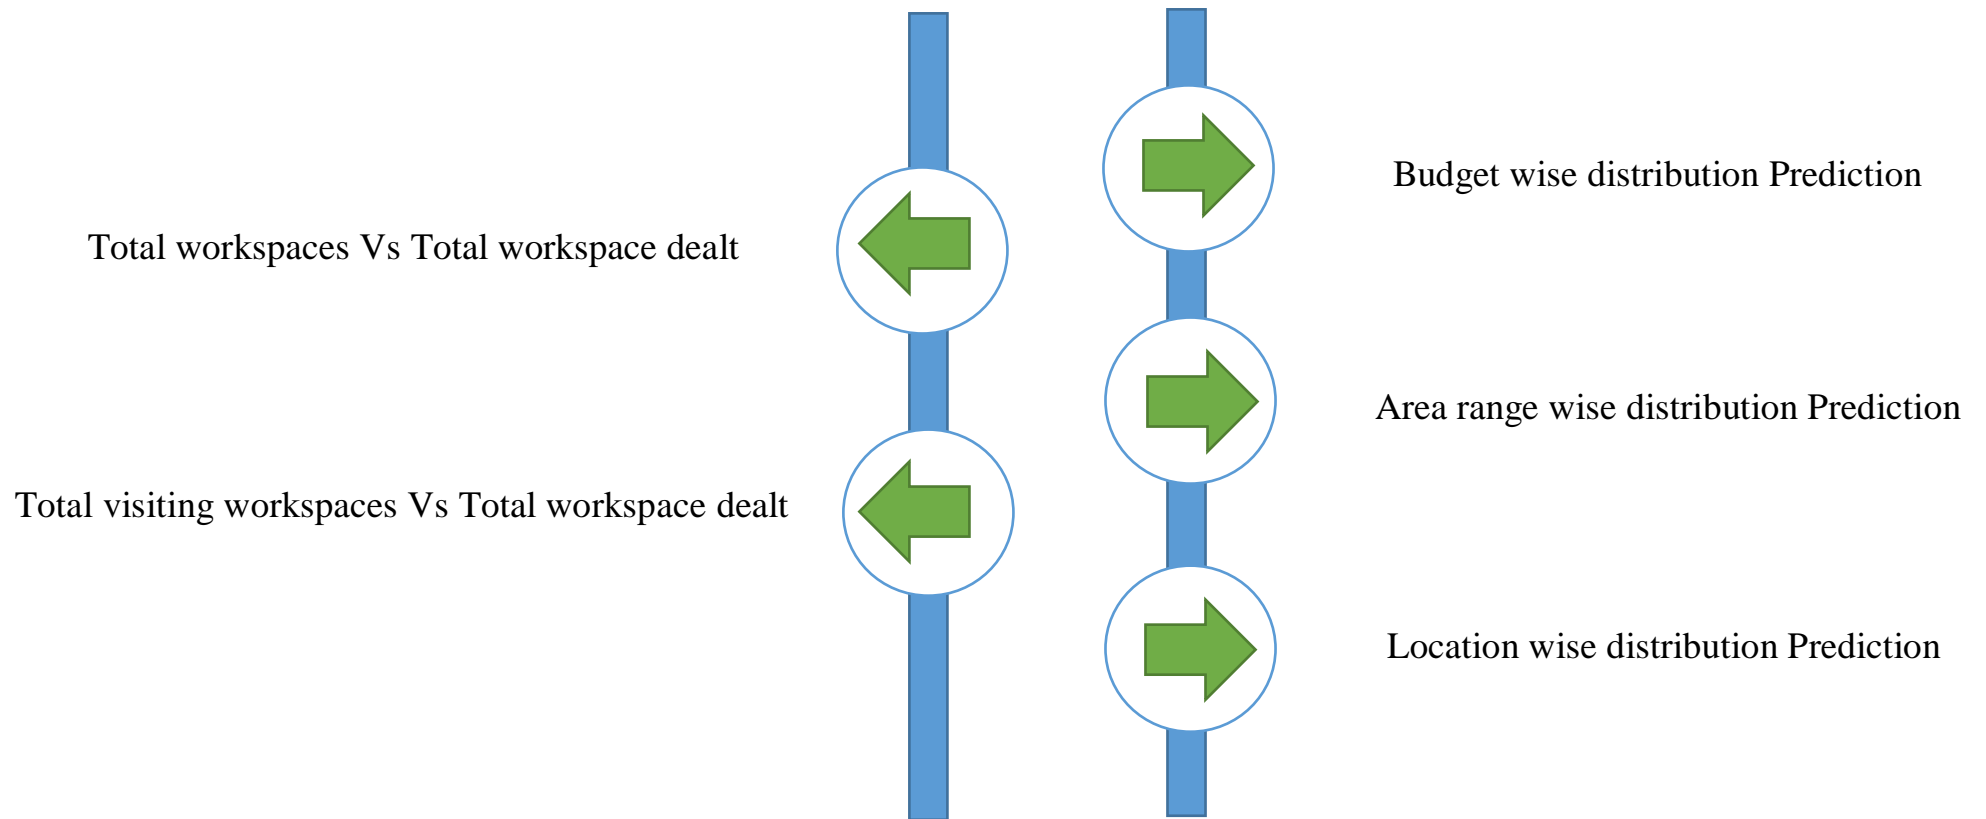

## Our Vision

- Envision a system that provides a platform for discovering the perfect workspace to match with any customer needs.
- Help the enormously increasing start-ups to fit into the appropriate workspaces by sharing the existing space.

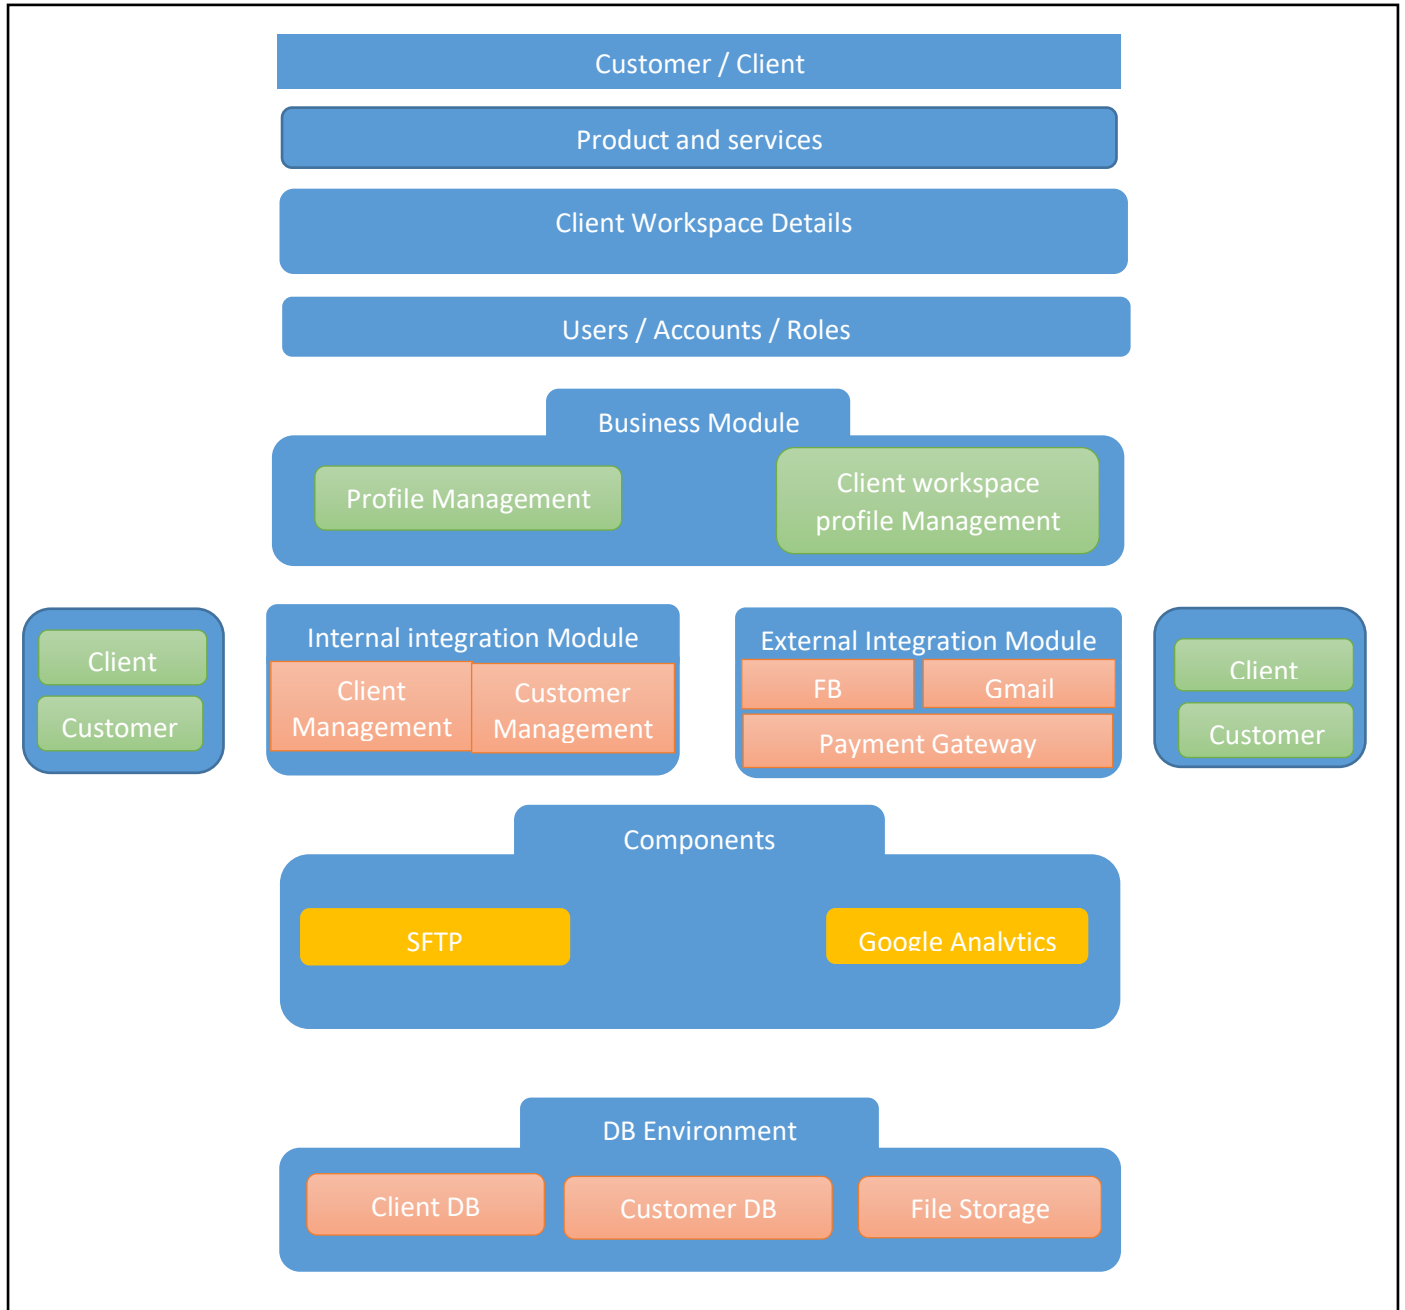

## Key Features

Sl. No.	Module	User Stories
1.	Client Registration	Client should be able to register to application using Facebook or Gmail account, so that Client can get access to the application.
2.	Client Authentication	Client should be able to authenticate himself / herself through Login, OTP or biometric to the application, so that user can get access to the application
3.	Customer Registration	Customer should be able to register to application using Facebook or Gmail account, so that Customer can get access to the application.
4.	Customer Authentication	Customer should be able to authenticate himself / herself through Login, OTP or biometric to the application, so that user can get access to the application
5.	Client (Submitted the details of his workspace)	Client will submitted all the details of their workspace. Details like Area (sq. ft.), Pin Location, Rent price (INR).
6.	Customer (Searching for suitable workspace by applying filters)	Customer will have a search button to search for suitable workspace. By click on that button, popup window will open and there we get an options to customize the fields (like: budget range, area range, Location). After customization click on Search button and system will redirected to recommend workspaces according to Customer requirements.
7.	Sorting option for Customer	In recommended workspace portal, Customer will also have the sorting order option according to Area (or) Location Range (or) Rent Price (or) Newest first.
8.	Gallery for workspace	Customer will also have an option to see the photos of workspace in different views (External photos: street view, front view, side views; Interior photos: photos should cover 360 degrees view).
9.	Map Location	Customer can easily find the workspace location on by using map Location option. This option will also help to find What's Nearby.
10.	Book a Visit to the place and Suggest Customizations	After discovering the appropriate workspace match with customer needs, Customer will Book a visit to place. After visiting, If the Customer needs any customization and he will suggest that to client. And client will customize their work space according to customer needs.
11.	Fix up on a Deal/ Agreement/Payment	Final step is to fix up on a deal/Agreement and payment processing.

## WIRE FRAMES FOR FEATURES

A wireframe for a workspace search modal. The modal is titled "SEARCH FOR WORKSPACES" in blue, bold, uppercase letters. It features a close button (X) in the top right corner. The search criteria are organized into three rows: "Location" with a text input field labeled "Enter Location"; "Budget Range" with "Min" and "Max" dropdown menus, showing ranges "min:5000-10L+" and "max:10000-10L+" respectively; and "Area Range" with "Min Sq.ft" and "Max Sq.ft" input fields. A large blue "SEARCH" button is positioned at the bottom of the form. The background of the modal is a blurred illustration of a modern office interior with people working at tables and hanging lights.

SEARCH FOR WORKSPACES		
Location	<input type="text" value="Enter Location"/>	
Budget Range	Min ▼ min:5000-10L+	Max ▼ max:10000-10L+
Area Range	<input type="text" value="Min Sq.ft"/>	<input type="text" value="Max Sq.ft"/>
